Middough Inc. Celebrates 2010 National Engineers Week

Company welcomed local high school students for a day focused on engineering opportunities, exploring different facets and career paths and becoming better acquainted with profession

CLEVELAND, Ohio (Feb. 24, 2010) — Middough Inc., a top ranking U.S. architectural, engineering and management services company, was pleased to announce its participation in the 2010 National Engineers Week by reaching out to current and future generations of engineering talent, this announcement was made by Marketing Manager, Peter Baka.

Middough hosted students from Rocky River High School at its Cleveland corporate headquarters for its 11th annual National Engineers Week event. Students were paired with engineering mentors for the day and had the opportunity to visit a variety of engineering associates within the company, learned about how exciting and challenging a career in engineering can be, spent time viewing 3D design software programs including Autodesk® Revit® and AutoCAD® and even enjoyed lunch with key associates and received a company tour.

“Our education outreach programs are designed to promote the engineering disciplines to students, help expand public recognition of the engineering profession and celebrate engineering accomplishments,” explained Chip Hoppel, industrial structural department manager. “It’s also a great time for our associates to emphasize to students the importance of learning math, science and technical skills.”

Students received information about opportunities for additional engineering activities and camps in the area as they move through high school, as well as a Middough National Engineers Week program certificate. “Middough enjoys giving back to the community,” Hoppel continued. “This is a wonderful opportunity for the company to bring awareness to the future generation about how rewarding a career in engineering can truly be. We have a lot of fun being a host company for the students and look forward to this event every year.”

In the United States, the celebration of National Engineers Week was started in 1951 by the National Society of Professional Engineers (NSPE). Traditionally the third full week of February is National Engineers Week and is observed by more than 70 engineering, education, cultural societies and more than 50 corporations and government agencies. The purpose of National Engineers Week is to call attention to the contributions to society that engineers make.
